

ADAM LEIS

FRONT-END DEVELOPER

OVERVIEW

Fullstack developer, preferring front-end development, with 9 years experience. Adaptable, fast-learning, and places strong emphasis on communication in the work-place and in UI design. Understanding in both the creative design and technical problem-solving processes. Experienced developing mobile-first responsive websites, responsive web applications for multiple platforms, and interactive data visualization. Fascinated by how creative uses of technology can facilitate meaningful experiences. Life-long lover of learning (philomath).

EXPERIENCE

Rosenboom Machine & Tool - **Software Engineer** 11/14 - 03/20

Position began as the front-end developer advancing technology and unifying the many (about 15) application UIs. Eventually became full stack developer building DevOps (Webpack), adding unit testing, and converting jQuery-based apps to use Vue.js and Vuex. Worked with Node.js & websockets for real-time updates. Also worked on converting CodeIgniter apps to use Phalcon in PHP; MySQL and SQL Server databases.

Anderson Robertson Marketing - **Dir. of Web Development** 02/14 - 11/14

Lawyerfind Network - **Front-end Developer** 09/12 - 02/14

Smart Sites Imaging - **Web Developer** 08/11 - 10/12

Each position involved managing client & internal websites, designing and redesigning sites, and interacting with clients directly to determine their needs. Websites were either custom built or used a popular CMS (Wordpress or Drupal). Communication is always critical which is why I always emphasize clarity to meet that need.
